

People Ignorant of How Medical Research is Achieved for Vaccines

By: Georgia Right to Life (GRTL)

NORCROSS, Ga., Jan. 12, 2021 /Christian Newswire/ -- Georgia Right to Life (GRTL) today charged that blind acceptance of COVID-19 vaccines linked to fetal cell lines in any part of their creation adds fuel to the continued trafficking of aborted children's remains. "Ignoring how most of these vaccines are being developed incentivizes and encourages the willful destruction of innocent children in future research," said GRTL President Ricardo Davis. "That attitude suggests that it is morally acceptable to commit evil to achieve a public benefit," Davis added. "That's not what medicine should be about, and it's not what our country should stand for."

Noting debate over whether any of the current vaccines are unethical, Davis pointed to those developed by Moderna and Pfizer/BioTech which employ a testing process that uses cell lines obtained from the kidney of an aborted baby girl.

A third vaccine by AstraZeneca, not yet available in the U.S., uses that same cell line in the design, development, production and testing

phases. "GRTL stands by the foundational principle that all human life is sacred and there's no acceptable excuse for exploiting the intentional death of a child, no matter how noble the cause," Davis said. "Tragically, these vaccines are only the tip of the iceberg. There are much worse examples of how immoral research is feeding the growing demand for what's left of a child after it's been mutilated in an abortion," Davis said.

"We've become dangerously ignorant of how some medical advances are achieved," he added. "Behind the scenes, researchers are taking advantage of the commodification of children's body parts. Have we forgotten David Daleiden's heroic work exposing how Planned Parenthood profits by selling the broken bodies of children killed by abortion for research purposes?"

The arguments to promote these vaccines as ethical have the undeniable consequence of promoting the continued use of the means and methods used to create them. Davis said these outrageous experiments reveal that we've hit rock

bottom of the "slippery slope of evil." For example, the University of Pittsburgh has developed humanized mice and rats with "full thickness human skin" using the corpses of pre-born children obtained at 18 to 20 weeks of gestation.

The goal is to determine how the immune system is affected if the skin has an infection. This absolutely gruesome process involved taking full thickness skin from the scalp and back, as well as reaping the liver and spleen, from the aborted child and transplanting and grafting them into the rodents and allowing them to grow.

Davis said, "Here's the call to action: Pro-life supporters need to get informed and become involved in efforts to demand an end to treating pre-born children like parts in an assembly line."

Georgia Right to Life promotes respect and effective legal protection for all innocent human life from earliest biological beginning through natural death. GRTL is one of a number of organizations that have adopted Personhood as the most effective pro-life strategy for the 21st century. **Visit: www.grtl.org**
